

## Science Chapter 7

1. weathering - slow wearing away of rocks into smaller pieces

2. erosion - movement of rock material from one place to another

3. glacier - a slow moving mass of ice

4. deposition - dropping of sediment by moving  $H_2O$ , wind, & ice

5. river system - a large river and all of the water ways that flow into it

6. bay - a body of water partly surrounded by land <sup>SFSD</sup><sub>M</sub>

7. headlands - a point usually tall jutting into a body of  $H_2O$

8. delta - a large mass of sediment deposited at the mouth of a river
